WEEKLY INSIDE

**LIVING ON THE
MOON: ELON
MUSK'S CURRENT
CRAZY PROJECT**

AFTER CREATING SELF-DRIVING CARS, ELON MUSK HAS STARTED A NEW CRAZY PROJECT. HE WANTS TO RELOCATE TO THE MOON. WE LEARNT YESTERDAY FROM A NASA EMPLOYEE THAT THE LUNAR ROBOT HAS SPOTTED SOME UNUSUAL ACTIVITY. AS A CONSEQUENCE, THEY DECIDED TO EXPLORE MORE PRECISELY WHAT HAPPENED IN THIS PART OF THE MOON. THEY DISCOVERED SOMETHING REALLY SURPRISING.

A strange place on the moon ?

With more research, researchers from Nasa discovered a hole that was built under a crater. They couldn't access farther, because it was a security door, and they didn't have the necessary material ; so they decided to check this place. A few days after, activity took place in this zone, and they saw a robot which came out from this place. It was a Russian robot, the Lunokhod 2.

A diplomatic issue

As a consequence, the research team immediately decided to let the president Biden know that there is a problem. After many negotiations with Vladimir Putin, they couldn't access more information. Biden decided to use spies in order to fix this issue. The discoveries they made are really surprising.

The collaboration of Russia and Elon Musk

The American government discovered that Elon Musk paid Roscosmos, the Russian equivalent of Nasa, in order to build a house on the moon. The billionaire indeed wants to relocate to the moon ! Actually, even though the whole planet thought it was only a dream, he made a project from this.

LIVING ON THE MOON ?

In order to better understand the difficulties of living on the moon, we decided to interview Mrs. Halter, who takes part in the research section of Nasa.

- **Hello Mrs. Halter, could you present yourself for our readers ?**

- Hello, yes, of course. My name is Anna Halter, I'm an employee from Nasa. I work in the research section, and I'm invested in the project of sending astronauts on the moon, and then on Mars.

- **What are the difficulties of living on the moon ?**

- There are many difficulties. Firstly, we can talk of the atmosphere of the moon, which doesn't exist, so we can't breathe. There is also an issue with the water, there isn't water on the moon, so it is impossible to live without dependance of Earth. Finally, if I have to choose one more danger, I would talk about radiation and temperature, which are really higher on the moon than on Earth because there isn't an atmosphere, so it's a risk for astronauts.

- **So, do you think that it would be possible to live on the moon despite all these dangers ?**

- I think that it isn't impossible, but really difficult. We need to import resources from Earth, and it is difficult. But, in my opinion, we have all the technologies that we could need and the most important difficulty is to combine them.

- **And what do you think about the new project of Elon Musk ?**

- According to me, it's completely crazy, but he has so much money, so I think he can manage to relocate to the moon. I don't really know what I could say in addition to that, it's the first time a project like this one is led.

- **Thank you so much for your intervention ! Goodbye.**

- Bye !

LIVING ON THE MOON ?

We were also lucky enough to be able to interview Patrick L. Chambers, a world-renowned geopolitician, to explain the issues raised by this crazy challenge set up by Elon Musk and Roscosmos.

- Good morning, and thank you for joining us. We're witnessing a remarkable event with Elon Musk, in collaboration with Roscosmos, establishing a human presence on the Moon. What are the immediate geopolitical implications of this development?

- Good morning, and thank you for having me. Indeed, we are experiencing a pivotal moment in both space exploration and geopolitical dynamics. The immediate implication is a potential shift towards either a new era of international cooperation in space or an intensification of space rivalry.

- How is this influencing international relations right now?

- The current scenario on the Moon is creating a complex dynamic among global powers. The collaboration could herald increased cooperative ventures in space exploration, but there's also a risk that it might fuel a competitive race for lunar dominance among other nations.

- With this development, what legal issues are coming to the forefront?

-The 1967 Outer Space Treaty, which prohibits any national claims of sovereignty over the Moon, is now being tested in real-time. The management of lunar resources, especially with the potential for lucrative mining and scientific research, is emerging as a contentious legal issue.

Are there concerns about security and defense in space because of this base?

-Absolutely. The establishment of a base, potentially perceived as having military capabilities, is already sparking discussions about an arms race in space. This development underscores the urgent need for new international agreements to ensure space remains a domain of peace and cooperation.

Are there concerns about security and defense in space because of this base?

-Absolutely. The establishment of a base, potentially perceived as having military capabilities, is already sparking discussions about an arms race in space. This development underscores the urgent need for new international agreements to ensure space remains a domain of peace and cooperation.

-What economic impacts are we seeing from this lunar colonization?

- We're on the cusp of unlocking new economic frontiers. The exploitation of lunar resources could transform the global economy, introducing new industries like lunar mining and space tourism. This is reshaping economic models and could potentially lead to new forms of economic competition and cooperation.

Pour créer cette fake news, nous avons d'abord cherché un sujet qui pourrait nous intéresser et nous permettre de créer une fake news. Nous avons donc décidé de faire une fake news en relation avec Elon Musk, et l'exploration spatiale, car c'est en lien avec nos deux spécialités.

Une fois que nous avons trouvé notre sujet, nous en avons parlé pour essayer de trouver des détails et des informations plus précises à ajouter, afin de rendre notre fake news plus réelle.

Ensuite, nous avons réfléchi au plan de notre article, et aux différentes informations que nous pourrions y mettre. On a décidé d'inclure des interviews afin que l'article soit plus crédible, et fasse plus vrai. Pour les personnes de l'interview, on a imaginé des noms réalistes pour apporter une dimension réelle aux interviews.

Pour finir, nous avons mis en page notre article. Nous avons cherché à nous inspirer des pages de journaux que nous avons pu voir pour que notre article paraisse vrai. Nous avons cherché à ajouter le plus de détails possibles, comme un titre, un numéro de publication, un nom de journaliste pour que l'article paraisse le plus vrai possible.
