

Subject n°16 : Natural perspective

You can draw on this picture but, please, do not forget to give the paper back at the end of the test.

Easter Island is a **Polynesian** island in the southeastern Pacific Ocean. A special territory of **Chile** that was **annexed** in 1888, Easter Island is famous for its 887 extant monumental statues, called *moai*, created by the early Rapanui people. It is a **UNESCO** World Heritage Site, with much of the island protected within Rapa Nui National Park. Easter Island is claimed to be the most remote inhabited island in the world.

- 1) Give the definition of a vanishing point.
- 2) The distance between two statues is approximately the same, but, are they the same size ? Justify.
- 3) Given that the man standing right at the corner of the wall is 1.80 m tall, find the height of the first statue.
- 4) In which plan does the photographer stand ? At what height are his eyes ?
- 5) As you are an artist, you want to add a sculpture of your own on the left side of the line. Draw a similar to the first one pedestal for this eighth statue.
